15.1. About Grey Chain 18

1. Proposal Introduction

Kamal Vekaria (Henceforth referred to as "Client" in the document) the client.

Grey Chain Technology Pvt. Ltd. (henceforth referred to as "Grey Chain" in the document) is the IT software services company and will be the supplier/app developer.
This Proposal defines detailed Business & Project Objective, Features & Functionality, Development Methodology, Client's role, Grey Chain's role, Development Period, Company Background, Cost & Payment Structure, and General Terms & Conditions.

2. Executive Summary

Grey Chain expresses thanks to the Client for the opportunity to participate in the design and development of "**JOBS PORTAL**". Grey Chain considers this as an opportunity to showcase its capability to client around delivering mobile based end-to-end application development and QA, which would be a stepping stone to a strategic and long term fruitful relationship with Client.

Through our matured Mobile Practice and thorough understanding of the business domain of "**Human Resources**" based mobility solutions we are very committed and confident of delivering the best of service(s) and support required to execute this project. The combined synergy with our Mobility and domain practices uniquely positions us to meet and exceed the objectives of this project.

At Grey Chain every aspects of mobile app development is done with proper research, high passion, and dedication for innovation, perfection and quality that enable our customers to turn their concept to high quality mobile apps. Our project management and team collaboration are calibrated to provide solution surpass your expectations. Our team works on best method, technology and execution that make the development phase interactive and innovative. We apply agile methodology development process that not only accommodate new requirement but also keeps you in track of your project.

3. Project Scope

This section defines project scope that has mutually been agreed between the client and Grey Chain with aim to achieve project and business objective with chosen development environment and technology. These listed requirements are considered to be the final scope of work, based on which Grey Chain development team will derive project plan with milestones deliverable to finish project within given time.

During course of project development if client brings in additional features, it will be considered as Change Request and will be dealt in accordance to mechanism defined in Change Request Section.

3.1.Our Understanding of the Project:

1. Summary:

My Jobs in Kenya is a leading jobs portal in Kenya. My jobs in Kenya (http://www.myjobsinkenya.com) has been running for the last 10 years. The web engine is now obsolete and hence needs to be revamped.

Job seekers come in and register and look for suitable job to apply for and be able to search for suitable jobs. Companies and advertisers log in to the client platform and post job's. The system should match existing with job seeker profiles and provide with shortlist of the eligible job seekers.

The shortlisting should be on the basis of psychological profiling and matching.

2. Key Development Requirements:

#	Item	Description
1	CMS Engine	Storage engine for all the user data
2	Job Seeker Platform	Registration and job search platform for job seekers
3	Client Platform	Interface for employers to post and manage job recruitments
4	Admin Panel	Backend System to manage the web portal
5	Profiling and Matching Engine	Logic engine for profiling and matching of traits from the requirements to the job seekers profiles.
6	3rd Party Integrations	Payment Gateway via API

3. Job Seeker Journey

#	Feature	Description
1	Home Page	Include Login, Registration and login for Employers
2	Login	Username & Password move to no. 5
2.1	Registration for new users	Move to No.3
2.2	Open Dashboard for registered user	Move to No.5
3	Registration	
3.1	Via Facebook	Get the users Name, Email ID, Sex, DOB & Friend list. Move to No.4
3.2	Via registration form	Email Id, Password, Name, Sex & Dob Move to No. 4
4	Setup	
4.1	Interests	Allow user to select his/her interests from a ready list
4.2	CV	Allow user to input Education, Contacts, Work Experience, Current Job, Skill, Language and upload image from web form.
4.3	Job Preferences	Allow user to pre-define preference for City, Industry, position and job type (Permanent, contract etc.)
5	Dashboard	
5.1	Career	
5.1.1	Personality Test	Pre-set personality questions that create a personality report via matching engine
5.1.2	Career Matching	Pre-set
5.1.3	Career Goal	Pre-set choices of questions that create a personal trait report via matching engine
5.2	My Profile	
5.2.1	CV	View and Edit CV
5.2.2	Interests	View and Edit interests
5.2.3	Settings	Change username, password, region and preferences
5.2.4	Purchases	View purchase history of premium products
5.3	Extras	
5.3.1	Career Coaching	Premium payable product
5.3.2	CV & Profile printing	Premium payable product
5.4	Jobs	
5.4.1	Recommended jobs	Based on CV and profiling

5.4.2	Search jobs	By category, location & Keyword
5.4.3	Saved Jobs	Jobs profiles that have been marked for follow up
5.4.4	My applications	List applications the user has made
6	Courses	Menu button on top right corner of dashboard
6.1	Recommended Courses	Based on CV and profiling
6.2	All Courses	List Categories of Courses
6.3	Current Courses	Course the user is currently engaged in
6.4	Completed Courses	Courses the user has completed
6.5	Saved Courses	Courses the user has marked in their wish list
7	Forum & Articles	
7.1	Recommended Articles	Display articles matching users career and profiling
7.2	Search Articles	Search by category, industry and Keyword
7.3	Saved Articles	Article the use has bookmarked
8	Message Canter	
8.1	Inbox	Receive in-portal messages
8.2	Compose	Compose messages
8.3	Sent Messages	View sent messages
8.4	Trash	Deleted messages

4. Employee Journey

#	Features	Description
1	Home Page	Live Icon on the top for Employee
2	Login /Register Page	Login for existing users & Register for new users
2.1	Login	Move to No.3
2.2	Register	Move to No.5
3	Registration	
3.1	Via registration form	Enter Company Name, brief history, industry, employee count and logo
4	Dashboard	
4.1	Home	
4.1.1	Recruitment	Take employee to campaigns page
4.1.1.1	Campaigns	List down options
A	Active	Active campaigns
B	Pending	Pending campaigns
C	Inactive	Inactive / previously run campaign
D	Drafts	Draft campaigns

E	All	All campaigns
F	Create new campaign	Enter Job title, category, industry, summary, responsibilities, employment type, location, start date, salary (optional) and requirements
G	Quiz	Create quizzes with answers for matching engine to automatically display best results
4.1.2	Talent Search	Search by Keyword, Education, Language, Age, category. Experience, skill or all.
4.1.3	Search & Report Creation	Search applications by percentage profile matching, skills, experience and generate report
4.2	News	Display industry relevant news and competitor movement
4.3	Settings	Allow the user to change company details, contacts, website, social outlets and add users
4.3.1	Manage Users	Create, delete or edit user profiles with options on rights access
4.4	Message centres	
4.4.1	Inbox	Receive in-portal messages
4.4.2	Compose	Compose messages
4.4.3	Sent Messages	View sent messages
4.4.4	Trash	Deleted messages
5	Job Seeker Profile Views	
5.1	View Profile	Open users profile and view basic items
.5.2	View full CV	Paid option
5.3	Contact User	Click on button to send the user generic messages. i.e. Please contact us / Are you looking for a new job? Etc.
5.4	Similar Profiles	List similar profiles

3. Back-end Interface Features:

#	Features	Description
1	Interface login	
1.1	Admin login	Manage entire suite
1.2	Super user login	Manage employer platform for individual company accounts
2	CMS management	
2.1	Collect all user data	Store user data
2.2	Reports	Daily, weekly & monthly reports of activity
2.3	Send mail shots	To all or selected
2.4	Send promo codes	To selected users (discount vouchers)

3	Theme management	Allow employer to Theme their company page
4	Courses Portal	API connect to external courses portal
5	Payment Gateway	API connect to external payment gateway for Mpesa (Mobile money payment) and major credit cards.

6. Additional Information

a. The current database is in SQL format and will be handed over to the developer for importing into the new portal
b. The general idea is to have a fusion design of Fuzu.com and Linkedin.com
c. The design needs to be simple and easy to navigate
d. The matching and profiling engine needs to be robust and customizable
e. The site should be supported on Opera Mini browser

7. Add-On: Android and iOS Apps

Job seeker and recruiter mobile app for profile and inbox management.

#	Features	Description
1	Profile Management	Manage user profile for latest information management
2	Inbox	Allow users to respond to queries from recruiters by managing the responses, etc.
3	Integration	Create integrated apps with web backend and panel

8. Add-On: Social Features like LinkedIn

Job seekers and companies being able to manage their profiles like LinkedIn and post queries, share thoughts, discuss jobs, network, etc.

#	Features	Description
1	Social Feed	Display a social feed based on user interests
2	Posts	Allow users to respond to queries from recruiters by managing the responses, etc.
3	Comments, Share and Like	Ability to share, comment on and like posts.
4	Profile Views	Ability to see profile views of potential recruiters as a paid feature.

9. SQL Database Migration

Migrate existing SQL database to the new SQL database structure setup for the new platform.

Scope and Services that would be rendered as:

Conception & Wireframes:
Grey Chain will provide all WIREFRAMES: All your "Requirements" will be translated to a visual blueprint of how the app works. Wireframes are more tangible way of understanding how the app will work. It is not a final representation of the app design, only a shell to work from.

Milestone Plan
Assigned Project Manager at Grey Chain will prepare the detailed task list and share it with you after the project is awarded to us. The task list will contain more detailed breakup of functionality and features covered in each milestone.

Graphics Design:
Grey Chain will provide graphics designs (UI) services for the project that includes Splash screen, app screens, Home Page, Inner page designs, App icons.

Development/Engineering:
Grey Chain would develop the entire application for the platforms mentioned in table using the mentioned technology or if specified by client.

Quality Control:
Grey Chain would perform all QC & Testing the system.
You will **receive intermediate builds for testing in your own device** at the completion of each defined milestones covering the features listed in task-list.

Deployment:
Setup & Deployment on Live Server: Grey Chain will guide the client to upload and launch application on the correct web hosting, iTunes & Play Store.

4. Solution Highlights

Modularity & Scalability
Application will have a modular architecture to ensure the business logic of previously designed functions need not be altered when implementing any new additional feature. The complete product architecture will be designed with scalability in mind, so that the app can be scaled to millions of users, when required.

Performance\ Memory Usage
To give better user experience all the long running tasks are handled asynchronously and keep the user interface interactive.
The application will keep the least required memory footprint for running the application and any garbage would be collected immediately.

Error Handling Mechanism

A standard mechanism for handling the errors will be followed. In case of any error generated, the application will display the user-friendly message. All the critical errors will be logged.

Application Login\ Other links
The user will provide its credentials for authentication. Only the authorised user will be able to login to the system.

Development Methodology
Agile Scrum delivery methodology will be used for this project with a sprint cycle of 2 weeks and a shipped version of the application will be shared with the client at the end of every 3 weeks. There will also be weekly standup calls setup with the client to ensure all the team meets regularly and discusses the project progress and changing priorities, if any.
Also, a dedicated team will be created for the project to ensure consistent delivery and coding practice.
All requirements will be added to the product backlog and before the start of every sprint, it will be planned and prioritized with the client (product owner).

5. Development Tools & Environment

Project/Application Server	The client will provide application server detail. Grey Chain will use its development servers while application is being created. Client is required to submit application server credentials once design is approved from the client's end. Grey Chain will be advising the client on picking up the right backend for the application.
Server Environment	LAMP
Deployment Environment	Client needs to inform Project Manager regarding any existing deployment environment before commencing the project.

	Project Manager would also suggest the deployment environment as per the requirement and need of project.
Project Management	Trello (trello.com)

5.1.Technology Platform

Website, Web Services & Admin

Software	Product
Programming Lang	PHP 5.x
Server	Apache 2.x
Database	MySQL 5.1.x or greater than MySQL 5.5.x
Operating System	Linux
Framework	CodeIgniter MVC
Web Service Format	JSON, REST API

iOS & Android

Platforms	iOS	Android
Programming Language	Swift 3/4	Core Java
IDE	Xcode 8/9	Android Studio
Supporting OS	iOS 7.0 to Latest	Android 5.0 to Latest
DB	My Sql and SQLite	
Designing Tools	Sketch 4x, Photoshop CSx, Adobe Illustrator CSx, Dreamweaver CSx (* x= the latest & established version of particular software)	

6. Key Success Factors

- We firmly believe project success is entirely depended on close coordination amongst all stakeholders of project to timely resolve queries, issues, concern, provide feedback, and participate in meeting whenever required.
- Timely and Proper KT (knowledge transfer) shall be provided by client to project team about low level details of projects, business need, expectation on different levels etc.

7. Assumptions

- Client will provide the access, environment of existing application if applicable and required for project.
- Client will provide the development license/access of third access tools, proprietary tools and APIs. Client will primarily coordinate with provider of third party tools in case of project team requires any support or clarification.
- Client has to borne the license cost of images, specific graphics required for GUI design.
- Client will provide development environment credentials and test the BETA application as per the schedule. Grey Chain will not be accountable if delay is at client end and hence client cannot hold the payment.
- Client has to carry out the required data entry in productions environment.
- Grey Chain will help client upload and launch application iTunes & Play Store.
- Client shall provide Server Details, Apple Developer Account & Google Play Developer Account.

8. Commercials & Timelines

Grey Chain proposes a fixed price contract of **USD 15,400*** for this engagement. The pricing will need to be revised if there is a change in scope/requirements (timelines will also differ).

- Any onsite travel will be billed on actual separately.
- Any hardware & software required to purchase will be billed separately.

This pricing is inclusive of Appfutura fees.

8.1.Cost Breakdown Structure

#	Project Component	Cost Breakdown (US $)*
1	UI Designing	1,100
2	Responsive Website, Web Services & Web Admin Panel	9,800
3	iOS App	1,800
4	iOS App	1,500

6	QA – Testing	1,200
7	**Total**	**15,400**

8.2.Payment Schedule

#	Requirements & Deliverables	Cost (US $)
1	Project Start	$3,500
2	UI Mockups & Project Plan	$1,400
3	Development Milestone 1 (Delivery & SignOff)	$3,000
4	Development Milestone 2 (Delivery & SignOff)	$3,000
5	Development Milestone 3 (Delivery & SignOff)	$3,000
6	100% Application Delivery	$1, 500
7	**Total**	**$15,400**

8.3.Project Timelines

Grey Chain follows the milestone approach to deliver the projects to its clients. We will divide the entire deliverables into milestones to be achieved in predefined timeframes.

Time lines for the development efforts **10** weeks.

Task	W1	W2	W3	W4	W5	W6	W7	W8	W9	W10
Project Setup & Requirements Review										
Designing										
Development										
Systems Testing										
UAT										

Deployment / Buffer										

9. Project Team Structure

Team Size: 8

Team Composition:

- Project Manager / Business Analyst- 1
- Mobile Tech Lead – 1
- Architect & DBA – 1
- Web & Admin – 1
- Android App Developer - 1
- iOS App Developer – 1
- UI Designer – 1
- QA - 1

Role	Responsibilities
Project Manager	• Overall accountability for delivery and execution of the project • Project Planning and Execution – Communication planning, Schedule, Manage Resource Requirements, Process Adherence • Project Tracking – Timelines, Budget, Resource Burnout and Reporting • Participate in reviews and workshops to detail out and manage requirements • Risk Management
Technical Lead	• Responsible for all Application/Technical Design issues • Ensure application and infrastructure design meets functional and non-functional requirements • Ensure optimal end-user experience • Ensure robust integration between the web application and mobile clients • Ensure code re-usability and componentization
Mobile & Web Developer	• Develop applications on mobile & web platforms • Ensure development is performed per best practices • Ensure optimal integration with the web-application • Ensure all mobile development standards are met • Unit Testing
QA Tester	• Prepare the system test cases • Ensure all client requirements are met • Test & add issues to the bug tracking system • Regression Testing • Ensure all mobile development standards are met

Graphic Designer	• Develop wireframes based on client input • Develop UI components working with the client & understand the scope of the - project • Ensure the developed product design matches the design aspects of the client

10. Change Requests

The essential changes required during or after the project duration need to be intimated to Grey Chain in change request form as in when provided by Project Manager. A change would be defined as those, which were not defined in earlier agreed scope of work either in terms of addition, deletion and/or change in Functionality (Business Logic), User Interface, the database and/or any other such aspect of the system. Grey Chain will charge the work to be done on an hourly or fixed cost basis mutually agreed by both parties. Depending on the severity of change, additional time and cost for the changes would be provided to client.

11. General Assumptions & Dependencies

11.1. General Assumptions

- Client will assign a Project Manager as SPOC (Single Point of Contact) to co-ordinate all the requirements.
- The mode of communication between Client and Grey Chain will be English only.
- Client will be responsible for providing all the receivables, within the mutually agreed time. Failure of meeting any such dependencies shall lead to change in project schedule, effort estimate and cost.
- Grey Chain and Client will mutually agree on the Acceptance Criteria at the end of requirements phase for any activity related to development or support.
- Major changes/ deviations encountered or requested will be reviewed as per the change control procedure. This may lead to revision of the estimates and are to be agreed with Client before being carried out.
- Any additions and/ or changes in the scope of work which will be finalized between Client and Grey Chain at the time of engagement, shall lead to change in project schedule, effort estimate and cost. Grey Chain will handle scope of changes using Change Management Procedure and it will be mutually agreed between Client and Grey Chain. The change required in any system outside the scope of Grey Chain will not be taken up by Grey Chain. Either Client or the respective vendor needs to undertake the same.
- Grey Chain and Client shall agree upon the structure and format (template) for all the documents to be produced by Grey Chain as deliverables of this project. Only after Client approves all templates; Grey Chain shall start documentation.

- There is no onsite presence anticipated as of now, if required will be billed to Client on the basis of actual.
- Distribution of product will be taken care by Client.

11.2. Dependencies

- Sign-off/ Approval of the Analysis deliverables will be signed off by Client within the stipulated and agreed timelines. If sign off is not received from Client in the stipulated time then it will be deemed as accepted by client. Any changes after this will be treated as Change Request.
- Availability of key personnel as SPOC from Client as agreed between Client and Grey Chain, throughout the Implementation phase to resolve any issues during project progress.
- Availability of Client staff for Acceptance and sign off of the project.
- Client needs to provide the approval on UI before any new development starts.

12. Support & Maintenance

Grey Chain would be providing the 60 day free bug support post UAT, if the code is not manipulated by any third-company.

Ongoing Maintenance

After completion of 60 day warranty support, client can sign separate contract for ongoing maintenance and support wherein Grey Chain may charge fixed fee on monthly or yearly basis which is dependent upon project complexity, nature of work, project size & magnitude, risk areas covered and service offered etc. We assign specific numbers of hours towards development/upgrades/bug-fixing & maintenance.

13. Deliverables

Grey Chain will provide the client with the below listed deliverables during the project.

- Mockups/Wireframes
- Project Plan Document
- High Level Design document
- Change Request Document (As applicable)
- Web & Mobile Client Application build after completion of every milestone
- Test Results
- UAT Report
- Warranty Support for 60 days
- Source code

14. Intellectual Property Rights

Grey Chain acknowledges that all materials displayed or otherwise accessible through the App, including without limitation, text, graphics, logos, images, audio and video clips, and software ("Content") will be the property of "Client" or other parties that have licensed such Content to "Client". The Content will be protected under applicable IP Law.

Grey Chain shall not, unless otherwise stated, copy, redistribute, use, modify, reproduce, display, decompile, reverse-engineer, transmit, sell, publish, commercially exploit or otherwise distribute the Content in any way or by any means whatsoever. This Application developed by Grey Chain will be personal, non-transferrable and non-assignable property of "Client", Grey Chain do not acquire ownership rights to any content obtained through this application.

We assign entire software rights, title, binaries, and code to the "Client", as part of this contract. All work products including patents, copyrights, trade secrets and other proprietary rights belong to the "Client".

15. Appendix

15.1. About Grey Chain

With 30+ young creative developers, designers and project managers, Grey Chain is a has helped more than 30 and organizations in building successful products and services. Grey Chain is a top-notch app development firm with expertise in iOS, Android and Hybrid App development.
We also have built our own successful products which have garnered more than 7,50,000 downloads in just a year. We offer end-to-end mobile and web development services across all functions and industries. Our Agile development approach ensures fast and reliable delivery.
