Project Estimate

Taxi Aggregator App (Request For Information)

Date: 30 Jan. 17

Client RFI Overview:

- An Ola/Uber like app for the Nepal Market.
- Platforms: iOS & Android
- No. of Apps: 4 (Driver-Android, Driver-iOS, Rider-Android & Rider-iOS)
- Feature set to the replicated from Ola or similar cab apps.
- Admin Functionalities & Analytics

High Level Project Estimate:

	Scoping	Design	Development & QA	UAT & Deployment
Time	2 Weeks	1 Month	5 Months	1-2 Months
Resources Needed	1 Project Manager	1 UI Designer 20% Project Mgr.	6 Developers 1 UI Designer 50% Project Mgr. 2 QA	3 Developers 50% Project Mgr. 1 QA
Grey Chain	▹ Prepare Scope Document ▹ Share Project Estimation	▹ Prepare Wireframes ▹ Prepare UI Mockups	▹ Development with constant product updates ▹ Status Update every 2 weeks ▹ Internal Testing	▹ Code handover ▹ Project handover ▹ Deployment Guidance ▹ Project Closure
Client	▹ Share High Level Requirements ▹ Signoff on Scope	▹ Approve wireframes and mockups	▹ Verify Development Progress	▹ UAT ▹ Deployment ▹ Project takeover

Please note, the project estimate is based on the feature assumptions provided below and may decrease or increase based on client requirements.

Resources Required:

- Project Manager (3 months)
- UI Designer (3 months)
- Sr. PHP/API Developer (5-6months)
- Jr. PHP Developer (6-7 months)
- Sr. Android Developer (5-6months)
- Jr. Android Developer (6-7 months)
- Sr. iOS Developer (5-6months)
- Jr. iOS Developer (6-7 months)

- QA (3 months)
- QA (2 months)

Feature Assumptions (Summary):

A replication of Ola (India based cab app) the app would require 5 main components:

- Android App – Driver
- Android App – Rider
- iOS App – Driver
- iOS App – Rider
- Web Based – Admin Controls / Panel

This estimate also assumes that there are only 2 types of cars like Uber X and Uber Go.

<u>Driver Apps:</u>

- Register as a driver (Phone Verification)
- Driver approval queue in Admin panel
- Driver can set availability
- Real-Time Location tracking
- Call rider or customer care
- Locate Customer
- Integration with Google Maps API
- Fare Calculation
- Rider Payment (Automated) Calculation
- Driver Month-end settlement (Automated) for Cash vs Digital Payment
- Monthly Calculation Summary for Transparency
- Profile Viewer and Editor
- Cancellation or Rejection Feature
- Notifications for Ride Assignments
- SMS Notifications
- Ride History with details (travel map, payment, rider, etc.)

<u>User Apps</u>

- Login (SMS Verification)
- Login using Facebook & Google w/ SMS verification
- User Profile
- Select Pick up Point (Map Based)
- Select Drop Point (Location text or Location on map)
- Map Search
- Google Maps API Integration
- Select Car Types
- View Fare / Rate Card

- Fare Prediction
- Select Drop Point
- Car Booking
- Car Cancellation
- Payment using Cash or 1 Payment Gateway
- SOS button
- Fare Calculation
- Automated Invoice in App / Email Invoice
- Track Driver
- See Cabs available nearby
- Predict Driver distance (in time)
- Rate / Review Driver
- Raise Dispute
- Share ride with friend to track on a web interface
- Ride History with details (map, driver, invoice, etc)
- In-App Notifications
- Driver / Booking Notifications on SMS
- Schedule a ride for later
- Promotional Codes (multiple code support)

About Grey Chain:

Grey Chain Technology (https://greychaindesign.com) is a App Development and UX Design Studio, headquartered in New Delhi.
